**Please read all warning and directions before proceeding.**

**Here is how,**

You need to be handy to do this.

Remove the stainless bolt near the top of the net pole, which is holding in place a 1-inch long piece of plastic or black rubber cap like sleeve. Take a look at how it positioned because you need to replace it later the same way.

In the middle of the net body, take careful note of how the black plastic band is woven through the netting. Cut off this black plastic band holding the net to the mid body. Work off the old net.

Work on the new net leaving more netting on the hoop wire side since it needs to expand when it opens. To make sure you have left enough netting, test it before replacing the bolt by putting something thin through the holes and wire arm hole and opening the net to make sure there is enough netting on the hoop side for the net to easily open. If it is ok then go ahead and replace the parts and netting. Align the holes and install the bolt right through the netting mesh. Open the net, & weave on the plastic band and tighten. Trim off the extra length of the black band and file smooth any sharp edge remaining on the cut piece of the band.

I have provided an extra bolt and nut in case the original is damaged during removal.

CAUTION-Make sure your net is zipped shut before use.

**WARNING! Please read!**

Keep clear of overhead wires

Safe use of this tool includes but is not limited to:

Training

Practice

Knowledge and being familiar with the animals you are attempting to handle.

Do not put yourself at risk

All animals can be unpredictable

**WARNING! Please read!**

**Use at your own risk.**
